

ABSTRACT

This application is drawn to novel amino acid sequences for mammalian polypeptides that have sequence similarity to human cell adhesion molecule KIAA1061, and processes for preparing the same. The clone identified has a nucleic acid sequence that is 4000 nucleotides long, contains an open reading frame from nucleotides 408-410 and 2934-2936, and encodes a novel polypeptide that is 842 amino acids long
